

### Technical description

**Application:**

Heating and cooling systems with variable flow.  
Air-conditioning.

**Function:**

Differential pressure control over the load.  
Closes at increasing  $\Delta p$ .  
D 512: Installation in return pipe.  
DF 512: Installation in inlet pipe.

**Pressure class:**

PN 25 or PN 16 (DN 100 and 125)

**Max. differential pressure:**

1600 kPa = 16 bar

**Temperature:**

Max. working temperature: 140°C  
Min. working temperature: -10°C

**Setting range:**

Differential pressure fixed at 12, 15, 20, 40, 60 and 100 kPa.

**Media:**

Water and neutral fluids, water-glycol mixtures.

**Material:**

Valve body: Ductile iron EN-GJS-400-18LT  
Diaphragms and gaskets: EPDM

**Surface treatment:**

Electrophoretic painting.

**Marking:**

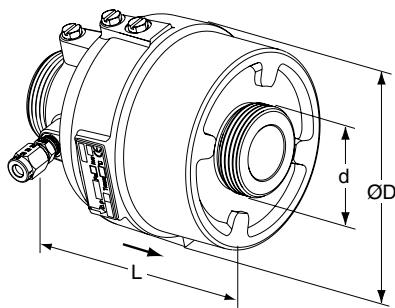

TA, DN, PN, GGG 40.3, Kvs,  $\Delta p$  and flow direction arrow.

**Flanges:**

DN 15-50 (optional): According to EN-1092-2:1997, type 16.  
DN 65-125: According to EN-1092-2:1997, type 21.

## D 512

### DN 15-50

### 12 kPa

TA No	DN	d	D	L	Kvs	Kg
<b>PN 25</b>						
52 764-420	15/20	G1	97	106	4	1,2
52 764-425	25/32	G1 1/4	112	125	12	2,2
52 764-440	40/50	G2	146	131	30	4,2

### 15 kPa

## Connections for DN 15-50

### With female thread

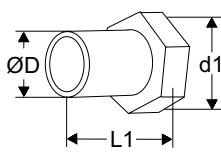

TA No	d1	d2	L1
52 759-015	G1	G1/2	26
52 759-020	G1	G3/4	32
52 759-025	G1 1/4	G1	47
52 759-032	G1 1/4	G1 1/4	52
52 759-040	G2	G1 1/2	52
52 759-050	G2	G2	64,5

### With male thread

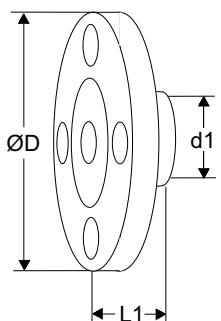

TA No	d1	d2	L1
52 759-115	G1	G1/2	34
52 759-120	G1	G3/4	40
52 759-125	G1 1/4	G1	40
52 759-132	G1 1/4	G1 1/4	45
52 759-140	G2	G1 1/2	45
52 759-150	G2	G2	50

### For welding

TA No	d1	D	L1
52 759-315	G1	20,8	37
52 759-320	G1	26,3	42
52 759-325	G1 1/4	33,2	47
52 759-332	G1 1/4	40,9	47
52 759-340	G2	48,0	47
52 759-350	G2	60,0	52

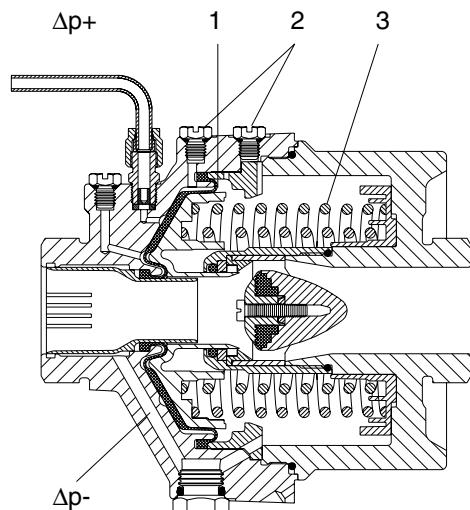

### With flange

TA No	d1	D	L1
52 759-515	G1	95	10
52 759-520	G1	105	20
52 759-525	G1 1/4	115	5
52 759-532	G1 1/4	140	15
52 759-540	G2	150	5
52 759-550	G2	165	20

## Operating function

### DN 15-50

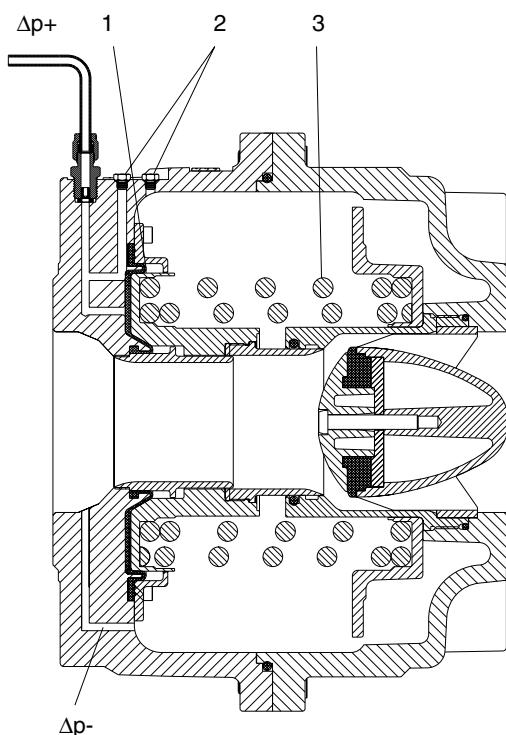

### D 512

Installation in the return pipe. The pressure upstream the consumer acts through an external copper impulse pipe ( $\Delta p+$ ) to the inlet side of the diaphragm (1) and closes the valve. The pressure downstream the consumer (in front of the valve) acts through an internal impulse pipe ( $\Delta p-$ ) to the outlet side of the diaphragm and together with spring (3) attempts to open the valve.

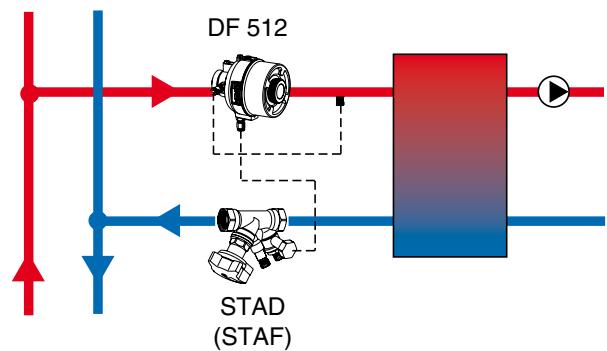

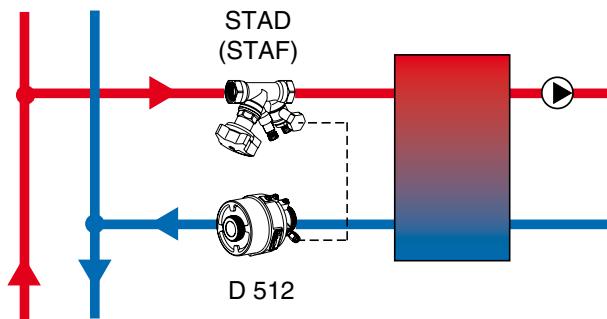

### DF 512

Installation in the inlet pipe. Function is the same as D 512, except that the pressure downstream the consumer (from behind of the controller) acts through the another external copper impulse pipe ( $\Delta p-$ ).

### DN 65-125

## Installation

Install the controller in the return pipe, downstream the consumer (**D 512**) or in the inlet pipe, upstream the consumer (**DF 512**).

Flow direction is shown by the arrow on the valve's identification plate (5). The best position is horizontal with vent screws (2) on top.

Installation of a strainer in front of the controller is recommended.

Connect copper impulse pipe ( $\Delta p+$ ) to the pipeline upstream the consumer. In case of DF 512, connect another copper impulse pipe ( $\Delta p-$ ) downstream the consumer (from behind the controller). In case of a horizontal pipeline connect the copper impulse pipe laterally to prevent air and dirt from entering.

It is important to ensure that working temperature and pressure do not exceed allowed values.

Before you mount the controller, check the fitting length of the controller and distance between connections on the pipeline. You should fit the connections (welding and threaded ends) to the pipeline first, then clean the remains of welding operations if needed. Then install the controller.

If you use flanged connections, check pitch diameter and the diameter of the holes for the screws.

When the pipeline and the controller are full of water and the pressure is stabilized, vent the controller by the vent screws (2).

Installation of balancing valve STAD (STAF) is recommended to enable flow measurement, commissioning and troubleshooting with balancing instrument TA-CBI or measuring instrument TA-CMI.

## Sizing

Select the size according to maximal speed. To prevent noise, maximal speed should not exceed 2 m/s in residential buildings and 3 m/s in industrial buildings. Control the pressure drop in the valve by formula:

$$\Delta p = 100 \times q^2 / K_{vs}^2 \text{ [kPa]}, \text{ where } q \text{ is flow in } m^3/h.$$
