

Multibox

The full all-rounder range

Multibox

The extended Multibox range from HEIMEIER now offers six convenient flush-mounted solutions for individual room temperature control and return temperature limitation of floor heating systems. Whether in conjunction with a thermostatic valve or return temperature limiter or for installing actuators, the Multibox can rise to any challenge.

Installing flush-mounted components for a floor heating system is fun with the Multibox. And with a comprehensive range of accessories, installation couldn't be simpler. The new pipe guide made of PU, for example, makes it easier to connect pipes and is suitable for all Multibox flush-mounted casings.

Easy installation

Even if the layout of the walls is unfavourable, installation is always easy and the results perfect. For example, it's possible to compensate depth imbalances of up to 30 mm. The heat insulation of connection pipes is also totally under control.

The design of the screw mounting device is particularly ingenious, making it possible to compensate the non-vertical installation of a flush-mounted casing by up to 6° on each side.

This feature has been welcomed very positively in practice. And after final installation, there is no way that the cover plate can be moved unintentionally (e.g., during renovation), as it is firmly attached to the flush-mounted casing on completion.

Quick installation, good looks, tried-and-tested quality and available in six variations.

Always perfect

The standard Multibox range includes the Multibox K for room temperature control, the Multibox RTL for return temperature limitation and the Multibox K-RTL, a thermostatic valve and return temperature limiter in one.

All three variations are available with frame (plus cover plate) and thermostatic head in white or chrome.

Multibox F

Multibox F
For individual room
temperature control
with integrated
remote dial

White
9306-00.800

Choose any colour
you want from the
colour clips.

Multibox F is a particularly elegant solution. The remote dial integrated into the frame is connected to the valve via a capillary tube.

This means that the external appearance remains consistent even if the position of the flush-mounted casing on the wall is different.

The closed graduation cap of the remote dial is really easy to clean. Not only that, but it can also be used in conjunction with the popular HEIMEIER colour and partner clips.

C/E

Multibox C/E

For individual room temperature control with thermal actuator or integrated remote dial

White
9308-00.800

Thermal actuator EMOtec

Room thermostat

Thermostatic head F remote dial

Multibox C/E has a closed cover plate that conceals a valve housing with thermostatic inserts. This has multiple uses, for example with HEIMEIER actuators, which can be used to regulate room temperature in conjunction with electric/electronic controllers.

Room temperature control without auxiliary power is possible with the thermostatic head F.

Multibox C/RTL

Multibox C/RTL

For return temperature limitation, e.g. for combined underfloor and radiator heating systems.

White
9303-00.800

Multibox C/RTL is fitted with an internal return temperature limiter. The closed cover plate is inconspicuous and prevents the set value from being unintentionally altered.
